# Travis

Discover more

Travis is a brand-new multi-track product, designed by Modular Pro Lighting. Its name origin was initially a word deriving from the French word "Traverser", which translates "To Cross". It has a different shape, which results in a distinctive looking in comparison with other magnetic series.

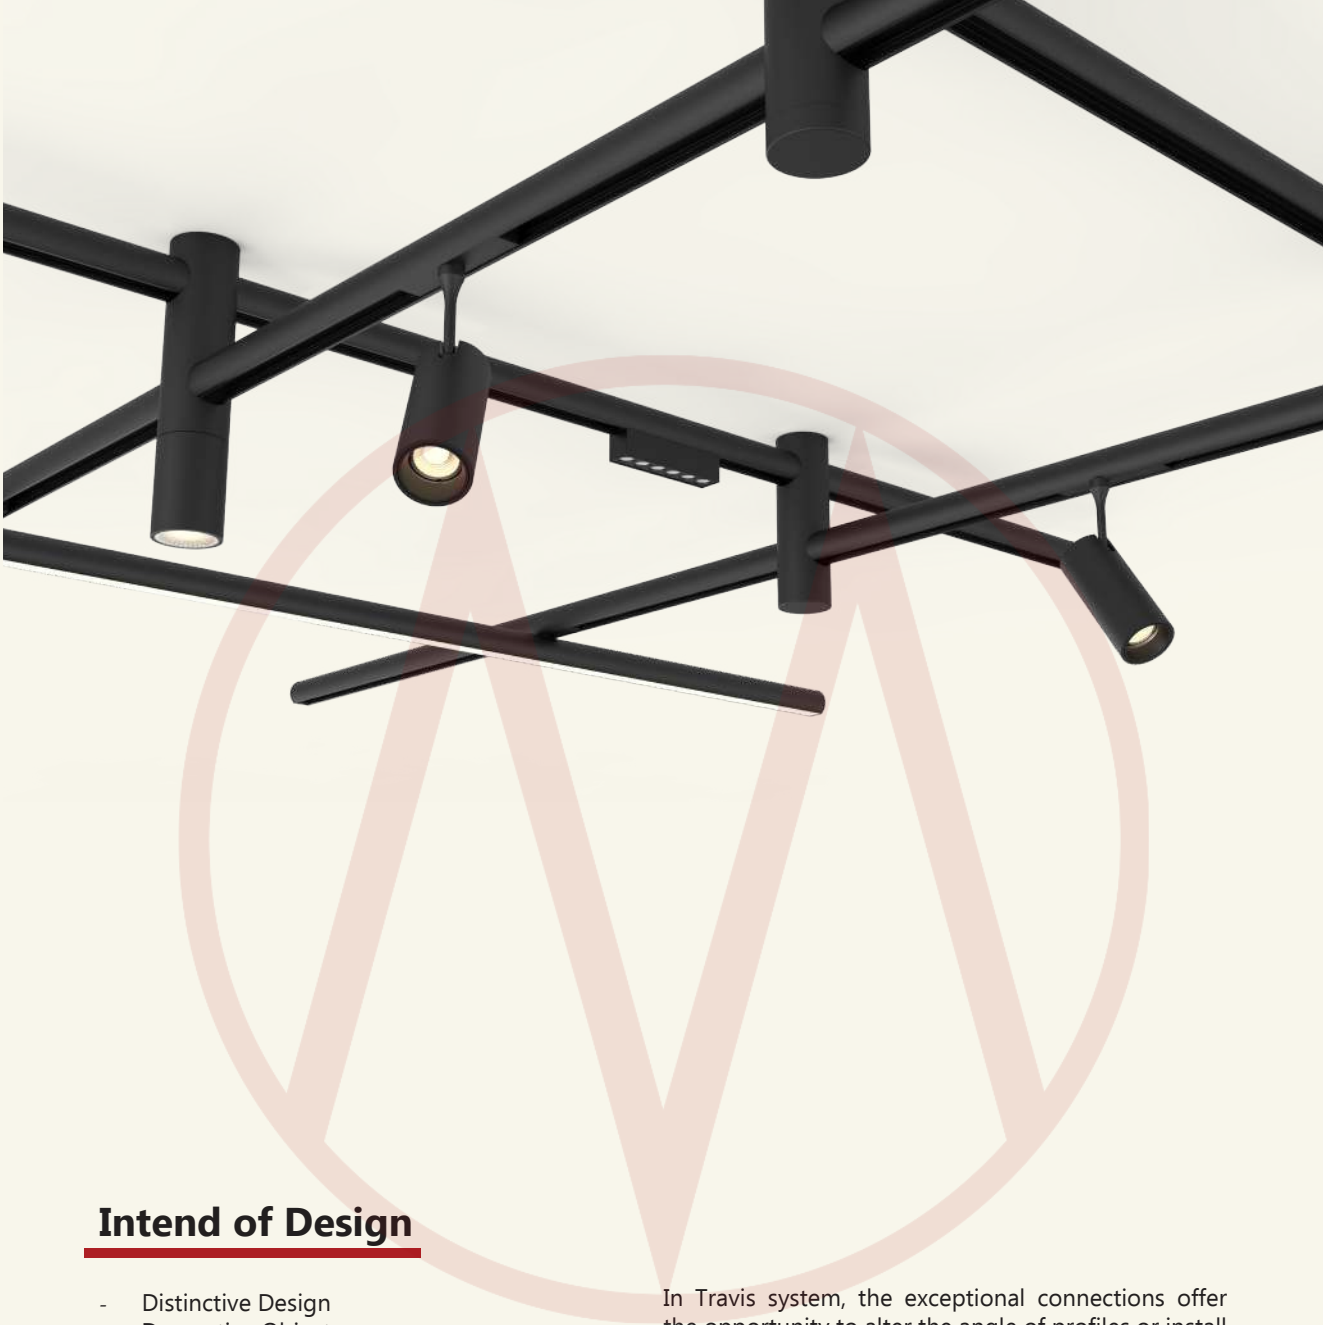

The round profile along with its modules provide both decorative and general lighting for designers who want to create various forms and shapes. This commercial light fixture, that has modular connections, is ideal for office, hospitality, studio, gallery, warehouse and even modern residential buildings.

## Connections & Joints

Travis is a completely modular system made out of aluminum. The flexibility feature in Travis multi-track system makes it possible to create different shapes such as curve forms with silicon linear lights. Furthermore, it gives you the chance to shape whether a decorative wall-mount lighting or a ceiling-mount one. Not only does this cause a bouncing lighting effect, but it can also be employed to function as a task light. Various forms are feasible to make, thanks to Travis exclusive connections and joints. For instance, rails can be installed with any angles in different heights.

## Intend of Design

- Distinctive Design
- Decorative Object
- Flexible in Forms
- Round Profile
- Various Lighting sources
- Unique Modules
- Modular Connection

In Travis system, the exceptional connections offer the opportunity to alter the angle of profiles or install them in two different heights.

The concept of Travis multi-track system is based on dots and lines. Spot lights represent dot shape, while the lines are shown by linear lights. You can choose whether to light the dots or the lines.
